NITROFURAN ANALYSIS USING LC/MS/MS

Michelson Laboratories is now incorporating the Finnegan TSQ Quantum Discovery Triple Stage Quadrupole MS/MS System into our inventory of state of the art instrumentation. This allows us to exceed the required detection limit of 1 ppb that the FDA has set for each of the four nitrofurantoin metabolites. This is the instrument used by the FDA for nitrofurantoin analysis.

*If you have an **import alert** from the FDA for nitrofurantoin contact our laboratory for assistance.*

[Also feel free to let us know if you have needs for other analyses by LC/MS/MS]
